

# Weekly Market Update

April 22, 2024

## Economic & Market News

### This Week:

- U.S. economic reports scheduled to be released this week include Manufacturing Purchasing Managers' Index (PMI), Durable Goods Orders, Q1 gross domestic product (GDP) and Personal Consumption Expenditure (PCE).
- Non-U.S. economic reports scheduled to be released this week include Manufacturing and Services PMI in the U.K., Euro area, and Japan, along with the Bank of Japan (BOJ) interest rate decision.

### Week in Review:

- Retail sales rose 0.7% in March (+1.3% including revisions to prior months), beating the consensus expected gain of 0.4%. Retail sales are up 4.0% versus a year ago.
- Housing starts declined 14.7% in March to a 1.321 million annual rate, substantially lagging the consensus expected 1.485 million. Starts are down 4.3% versus a year ago.
- Existing home sales declined 4.3% in March to a 4.190 million annual rate, slightly lagging the consensus expected 4.200 million. Sales are down 3.7% versus a year ago.

# Important Information

## Source Information & Technical Terms

<sup>1</sup>Style boxes are derived from the components of the S&P 1500<sup>®</sup> Index. <sup>2</sup>May include flash/preliminary estimates. <sup>3</sup>Characteristics are as 03.31.2024.

**Past performance is not indicative of future results. Any type of investing involves risk and there are no guarantees that these methods will be successful. Economic charts are provided for illustrative purposes only. The information provided herein is subject to market conditions and is therefore expected to fluctuate.**

**Economic & market news** provided by Sterling Capital Advisory Solutions.

**Commodity rates** (oil, gold, gasoline), **currency rates** (dollar per pound sterling, dollar per euro, yen per dollar), **upcoming U.S. economic events, bond rates** (fed funds target rate, 2Y Treasury, 10Y Treasury, 3M LIBOR, 10Y municipal, U.S. IG corporate, U.S HY corporate), **10Y Treasury yields** and **S&P 500 Index levels** are all sourced from FactSet.

**Capitalization/style returns** are based on S&P Indexes. All values are cumulative total return for stated period including the reinvestment of dividends. Top row indices (L-R): S&P 500 Value; S&P 500; S&P 500 Growth. Middle row indices (L-R): S&P Mid Cap 400 Value; S&P Mid Cap 400; S&P Mid Cap 400 Growth. Bottom row indices (L-R): S&P Small Cap 600 Value; S&P Small Cap 600; S&P Small Cap 600 Growth. The S&P 500, S&P Mid Cap 400, and S&P Small Cap 600 are defined on the next page. S&P Style indices measure growth and value along two separate dimensions, with three factors each used to measure growth and value. Growth factors: 3-year change in earnings per share over price per share; 3-year sales per share growth rate; momentum. Value factors: book value to price ratio; earnings to price ratio; sales to price ratio. Source: Morningstar Direct.

**Equity index characteristics:** P/E, P/B, and P/CF ratios for all indices are based on TTM period. Source: Morningstar Direct. Index definitions are on the next page.

**S&P 500 sector returns** are based on the GICS Classification model. Returns are calculated by Morningstar Direct using constituents and weights provided by Standard and Poor's. Returns are cumulative total return for the stated period, including reinvestment of dividends. Source: Morningstar Direct.

**Index returns:** Prices reflect closing price level for each stated date. Source: Morningstar Direct.

**The Federal Open Market Committee (FOMC)** is the branch of the Federal Reserve System (FRS) that determines the direction of monetary policy in the U.S. by directing open market operations (OMOs). The committee is made up of 12 members, including seven members of the Board of Governors, the president of the Federal Reserve Bank of New York, and four of the remaining 11 Reserve Bank presidents, who serve on a rotating basis.

A **seasonal adjustment** is a statistical technique designed to even out periodic swings in statistics or movements in supply and demand related to changing seasons. It can, therefore, eliminate misleading seasonal components of an economic time series. Seasonal adjustment is a method of data-smoothing that is used to predict economic performance or company sales for a given period.

A **non-seasonal adjustment** analyses of the data cannot yield accurate results. If each period in a time series—for example, each month in the fiscal year—has a different tendency toward low or high seasonal values, it can be difficult to detect the true direction of the underlying trends of the time series. Difficulties may include increases or decreases in economic activity, turning points, and other economic indicators.

The **seasonally adjusted annual rate (SAAR)** is an adjustment made to financial and economic data to take into account seasonal variations that occur through a period and is expressed as an annual total.

The **fed funds rate** refers to the interest rate that depository institutions (such as banks and credit unions) charge other depository institutions for overnight lending of capital from their reserve balances on an uncollateralized basis.

**Price-to-book (P/B)** compares the book value of fund's stocks with their market value. The P/B ratio indicates how much an investor is paying for a company's assets based on historical valuations. It does not reflect current market value.

**Price-to-cash flow (P/CF)** is a stock valuation indicator or multiple that measures the value of a stock's price relative to its operating cash flow per share.

**Price-to-earnings (P/E)** compares the price of a fund's stocks with their per-share earnings. A higher ratio indicates the market's belief that a company is able to increase its earnings.

**Trailing twelve months (TTM)** is a term used to describe the past 12 consecutive months of a company's performance data, typically used for reporting financial figures.

**Real gross domestic product (GDP)** is an inflation-adjusted measure of the value of all goods and services produced by an economy in a given year, using base-year prices.

**Weighted average market capitalization** refers to a type of stock market index construction that is based on the market capitalization of the index's constituent stocks.

# Important Information

## Index Definitions

**A Note on Indices: The volatility of an index varies greatly. All indices are unmanaged, and investments cannot be made directly in an index.**

The **Bloomberg U.S. Aggregate Bond Index** is an unmanaged, market-value-weighted index of taxable investment-grade fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities, with maturities of one year or more.

The **Bloomberg Commodity Index (BCOM)** is calculated on an excess return basis and reflects commodity futures price movements. The index rebalances annually weighted 2/3 by trading volume and 1/3 by world production and weight-caps are applied at the commodity, sector and group level for diversification. Roll period typically occurs from 6th-10th business day based on the roll schedule.

The **Bloomberg U.S. Corporate High Yield Index** is an unmanaged, U.S. dollar-denominated, nonconvertible, non-investment-grade debt index. The index consists of domestic and corporate bonds rated Ba and below with a minimum outstanding amount of \$150 million.

The **Bloomberg U.S. Corporate Investment Grade Index** is an unmanaged index composed of the qualifying universe of investment grade rated taxable corporate bonds. The index includes U.S.-denominated securities publicly issued by U.S. and non-U.S. industrial, utility, and financial issuers.

The **Purchasing Managers' Index (PMI)** is an index of the prevailing direction of economic trends in the manufacturing and service sectors. It consists of a diffusion index that summarizes whether market conditions are expanding, staying the same, or contracting as viewed by purchasing managers. The purpose of the PMI is to provide information about current and future business conditions to company decision-makers, analysts, and investors.

The **Personal Consumption Expenditures (PCE)** includes a measure of consumer spending on goods and services among households in the U.S. The PCE is used as a mechanism to gauge how much earned income of households is being spent on current consumption for various goods and services.

The **Producer Price Index (PPI)** measures the average change over time in the prices domestic producers receive for their output.

The **Michigan Consumer Sentiment Index (MCSI)** is a monthly survey of consumer confidence levels in the United States conducted by the University of Michigan. The survey is based on telephone interviews that gather information on consumer expectations for the economy.

The **DJ Equity ALL REIT Index** represents all publicly traded real estate investment trusts in the Dow Jones U.S. stock universe classified as Equity REITs according to the Dow Jones REIT Industry Classification Hierarchy. These companies are REITs that primarily own and operate income-producing real estate.

The **ICE 3M USD LIBOR** is the primary benchmark for short-term interest rates globally, used for mortgages, loans, for interest rate contracts on futures and options exchanges, and as a general gauge of the health of financial monetary markets.

The **ISM Non-Manufacturing Index** is based on surveys of more than 400 non-manufacturing (services) firms' purchasing and supply executives in 60 different sectors.

The **ISM Manufacturing Index** is a monthly indicator of U.S. economic activity based on a survey of purchasing managers at more than 300 manufacturing firms.

The **Leading Indicators Index** is a composite index based on 12 economic indicators, that is designed to predict the future direction of the economy.

The **MSCI ACWI Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI consists of 46 country indexes comprising 23 developed and 23 emerging market country indexes.

The **MSCI World ex USA Index** captures large and mid cap representation across 22 of 23 Developed Markets (DM) countries excluding the United States. The index covers approximately 85% of the free float-adjusted market capitalization in each country.

The **MSCI Emerging Markets Investable Market Index (IMI)** captures large, mid and small cap representation across 23 Emerging Markets (EM) countries. The index covers approximately 99% of the free float-adjusted market capitalization in each country.

The **S&P 500® Index** is a readily available, carefully constructed, market-value-weighted benchmark of common stock performance. Currently, the S&P® Composite includes 500 of the largest stocks (in terms of stock market value) in the United States; prior to March 1957 it consisted of 90 of the largest stocks.

The **S&P Composite 1500** combines three leading indices, the S&P 500®, the S&P MidCap 400, and the S&P SmallCap 600 to cover approximately 90% of the U.S. market capitalization. It is designed for investors seeking to replicate the performance of the U.S. equity market or benchmark against a representative universe of tradable stocks.

The **S&P SmallCap 600® Index** is designed to measure the performance of the small capitalization sector of the U.S. equities market. This index consists of 600 domestic stocks chosen for market size, liquidity, (bid-asked spread, ownership, share turnover and number of no trade days) and industry group representation.

The **S&P MidCap 400® Index** is designed to measure the performance of the mid capitalization sector of the U.S. equities market. This index consists of 400 domestic stocks chosen for market size, liquidity, (bid-asked spread, ownership, share turnover and number of no trade days) and industry group representation.
