Philosophy and Process

The fund purchases companies that the portfolio manager believes are priced significantly below their intrinsic worth as well as those that demonstrate sustainable competitive advantages and high returns on invested capital. The portfolio management team partners with shareholder-oriented company management that has demonstrated a track record of strong capital allocation. The management process identifies investment opportunities from the broad equity universe using fundamental analysis, valuation and risk management to select 30 to 50 holdings within the fund. The strategy is oriented toward long-term investing but the manager will sell a holding that has become less attractive or underperforms expectations or has excessive leverage.

Fund Facts

Investment Objective:

Seeks long-term growth of capital by investing the Fund's assets primarily in equity securities of companies that are considered to be undervalued.

Total Net Assets	\$46,973,795
Number of Holdings	40
Wtd. Median P/E	16.4x
Wtd. Median P/B	1.8x
Wtd. Avg. Market Cap	\$18.32B
Active Share	95.2%
Turnover	32%

Total Expense Ratio

	Net	Gross
A Shares (OVEAX)	1.11%	1.11%
C Shares (OVECX)	1.86%	1.86%
Inst'l Shares (OVEIX)	0.86%	0.86%
R6 Shares* (STRMX)	0.77%	0.86%

The Fund Administrator, Sterling Capital Management LLC, has contractually agreed to waive its administrative fees, pay Fund operating expenses, and/or reimburse the Fund .09% of the Class R6 avg. daily net assets for the period February 1, 2022 through January 31, 2023. Performance would have been lower without limitations in effect.

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month end and information on other share classes, please visit www.sterlingcapital.com. Performance for periods greater than one year is annualized.

A Note on Indices: The volatility of an index varies greatly. All indices are unmanaged and investments cannot be made directly in an index.

The Russell Midcap® Value Index measures the performance of the midcap value segment of the U.S. equity universe. It includes those Russell Midcap® Index companies with lower price-to-book ratios and lower forecasted growth values. The Russell Midcap® Value Index is constructed to provide a comprehensive and unbiased barometer of the mid-cap value market. The index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true midcap value market.

The Bloomberg U.S. Mid Cap Value Index is a float market-cap-weighted index based on an equal-weighted combination of four factors: earnings yield, valuation, dividend yield, and growth.

The Lipper Mid-Cap Core Index reflects the average time-weighted rate of return of a representative group of mid-cap core funds over time. Refinitiv™ Lipper® defines a mid-cap core fund as a fund that, by portfolio practice, invests at least 75% of its equity assets in companies with market capitalizations (on a three-year weighted basis) below Refinitiv Lipper's USDE large-cap floor. Mid-cap core funds have more latitude in the companies in which they invest. These funds typically have average characteristics compared with the S&P MidCap 400® Index. The funds that comprise the index are intended to be employed as a good representation of combined peer group performance, acting as relevant benchmarks to measure single fund manager performance and rankings within that peer group. Lipper ensures that no restricted track record extensions are permitted, meaning only real histories represent the independently collected data. Source: Refinitiv Lipper.

Sector Allocation

Allocations are based on the current weight to funds in the cited Sector. The composition of the fund's holdings is subject to change.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. Morningstar Quartile (Percentile)		4th (94%)	3rd (73%)	4th (82%)	3rd (63%)

Investment Considerations

The fund may invest in undervalued securities which may not appreciate in value as anticipated or remain undervalued for longer than anticipated. Investments made in small to mid-capitalization companies are subject to greater risks than large company stocks due to limited resources and inventory as well as more sensitivity to adverse conditions. The fund may invest in foreign securities which may be more volatile and less liquid due to currency fluctuation, political instability, social and economic risks.

Ratings and Rankings would have been lower for Class A shares due to fees and expenses. Lipper and Morningstar rankings are based on total return, including the reinvestment of dividends and capital gains but do not include sales charges for the periods indicated. Rankings shown are for Class I Shares and may be lower for Class A Shares due to higher fees and expenses. Mutual funds are assigned a rank within a universe of funds, relative to a peer group and similar in investment objective as determined by Lipper and Morningstar. The lower the number rank, the better the fund performed compared to other funds in the classification group. Lipper and Morningstar also calculate a percentile measure for each fund ranging from 1% (best) to 100% (worst).

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. ©2022 Morningstar. Technical Terms: **Active Share** measures the percentage of stock holdings in a manager's portfolio that differ from the benchmark index. **Alpha** measures the performance of an investment as compared to a suitable benchmark index. An alpha of one (the baseline value is zero) shows that the return on the investment during a specified time frame outperformed the overall market average by 1%. A negative alpha number reflects an investment that is underperforming as compared to the market average. **Beta** measures the volatility of returns relative to the entire market. It is used as a measure of risk and is an integral part of the capital asset pricing model. A company with a higher beta has greater risk and also greater expected returns. **Portfolio Turnover Rate** measures a fund's annual trading activity. It is a percentage used to demonstrate how many holdings in a mutual fund were replaced within the year. **R-Squared** represents what amount of a fund's movements can be explained by movements in its benchmark index. A high R-Squared (between 85 and 100) indicates the fund's performance patterns have been in line with the index. **Sharpe Ratio** is commonly used to gauge the performance of an investment by adjusting for its risk. The higher the ratio, the greater the investment return relative to the amount of risk taken, and thus, the better the investment. The ratio can be used to evaluate a single stock or investment, or an entire portfolio. **Standard Deviation** measures the magnitude of deviations between the values of the observations contained in the dataset. From a financial standpoint, the standard deviation can help investors quantify how risky an investment is and determine their minimum required return on the investment. **Upside/Downside Capture Ratio** represents fund's cumulative return divided by its benchmark's cumulative return during positive and negative market periods. **Weighted Average P/B** compares the book value of fund's stocks with their market value. The price to book ratio indicates how much an investor is paying for a company's assets based on historical valuations. It does not reflect current market value. **Weighted Median P/E** compares the price of a fund's stocks with their per-share earnings, with a higher ratio indicating the market believes that a company has the ability to increase its earnings.
