Overall Morningstar Rating™

Overall rating based on risk-adjusted returns against 584 Funds in the Morningstar U.S. Fund Small Blend Category as of 03.31.2024, derived from a weighted average of the performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating metrics. (STSCX)

Fund Facts

Investment Objective:

Seeks long-term capital appreciation.

Total Net Assets	\$268,277,981
Number of Holdings	43
Wtd. Median P/E	19.63x
Wtd. Median P/B	2.61x
Wtd. Avg. Market Cap	\$10.16B
Active Share	95.84%
Turnover	2%

Total Expense Ratio

	Net	Gross
A Shares (STSNX)	1.30%	1.30%
C Shares (STSOX)	2.05%	2.05%
Inst'l Shares (STSCX)	1.05%	1.05%
R6 Shares ¹ (SCSIX)	0.92%	1.05%

¹The Fund Administrator, Sterling Capital Management LLC, has contractually agreed to waive its administrative fees, pay Fund operating expenses, and/or reimburse the Fund .13% of the Class R6 avg. daily net assets for the period February 1, 2024 through January 31, 2025. Performance would have been lower without limitations in effect.

10Y Risk Statistics vs. R2000® Value

Alpha	1.41%
Beta	0.89
R-Squared	93.54%
Standard Deviation	19.07%
Sharpe Ratio	0.33
Up Capture Ratio	90.51%
Down Capture Ratio	87.76%

30-Day SEC Yield

	With Waivers	Without Waivers
A Shares (STSNX)	0.31%	0.31%
Inst'l Shares (STSCX)	0.57%	0.57%

SEC Yield is an annualization of the Fund's total net investment income per share for the 30-day period ended on the last day of the month.

Fund Performance For the period ended 03.31.2024	QTR	YTD	1Y	3Y	5Y	10Y
A Shares with 5.75% Sales Charge	1.60%	1.60%	16.34%	4.33%	8.94%	6.84%

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month end and information on other share classes, please visit www.sterlingcapital.com. Performance for periods greater than one year is annualized.

Performance for Class A is based on the performance of the Institutional Shares of the Predecessor Fund. Class A Shares and Institutional Shares of the Fund would have substantially similar performance because the Shares are invested in the same portfolio of securities and the performance would differ only to the extent that the Classes have different expenses.

Sector Allocation

Allocations are based on the current weight to funds in the cited Sector. The composition of the Fund's holdings is subject to change.

Philosophy & Process

The Fund uses a value investment approach to invest primarily in common stock of small capitalization companies (those with market capitalizations that are below the market capitalization of the largest company in the Russell 2000® Index). We believe that undervalued companies with good earnings prospects have superior appreciation potential with reasonable levels of risk. Quantitatively, we focus on a stock's fundamental valuation relative to its peers. Qualitatively, we seek to identify business catalysts which will serve to drive future earnings growth, increase investor interest and expand valuation. In addition to outperforming the broad market over longer periods of time, we believe that the small cap segment of the U.S. equity market, given its less efficient nature, offers significant opportunity to add value through active portfolio management. A combination of a larger investment universe, less research coverage, and strong growth potential creates a favorable backdrop for investment in select under-followed and/or underappreciated small companies.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Fund, please call 888.228.1872 or visit our website at www.sterlingcapital.com. Read the prospectus carefully before investing.

A Note on Indices: The volatility of an index varies greatly. All indices are unmanaged and investments cannot be made directly in an index.

The Russell 2000® Value Index measures the performance of small-cap value segment of the U.S. equity universe. It includes those Russell 2000® companies with lower price-to-book ratios and lower forecasted growth values. The Russell 2000® Value Index is constructed to provide a comprehensive and unbiased barometer for the small-cap value segment. The index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set and that the represented companies continue to reflect value characteristics.

The Bloomberg U.S. 2000 Value Index is a float market-cap-weighted benchmark of the lower 2000 in capitalization of the Bloomberg U.S. 3000 Index that provides exposure to companies with superior value factor scores based on their earnings yield, valuation, dividend yield, and growth.

The Lipper Small-Cap Core Index reflects the average time-weighted rate of return of a representative group of small-cap core funds over time. Refinitiv™ Lipper® defines a small-cap core fund as a fund that, by portfolio practice, invests at least 75% of their equity assets in companies with market capitalizations (on a three-year weighted basis) below Refinitiv Lipper's USDE small-cap ceiling. Lipper ensures that no restricted track record extensions are permitted, meaning only real histories represent the independently collected data. Source: Refinitiv Lipper.

Ratings and Rankings would have been lower for Class A shares due to fees and expenses. Lipper and Morningstar rankings are based on total return, including the reinvestment of dividends and capital gains but do not include sales charges for the periods indicated. Rankings shown are for Class I Shares and may be lower for Class A Shares due to higher fees and expenses. Mutual funds are assigned a rank within a universe of funds, relative to a peer group and similar in investment objective as determined by Lipper and Morningstar. The lower the number rank, the better the fund performed compared to other funds in the classification group. Lipper and Morningstar also calculate a percentile measure for each fund ranging from 1% (best) to 100% (worst).

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. ©2024 Morningstar. Technical Terms: **Active Share** measures the percentage of stock holdings in a manager's portfolio that differ from the benchmark index. **Alpha** measures the performance of an investment as compared to a suitable benchmark index. An alpha of one (the baseline value is zero) shows that the return on the investment during a specified time frame outperformed the overall market average by 1%. A negative alpha number reflects an investment that is underperforming as compared to the market average. **Beta** measures the volatility of returns relative to the entire market. It is used as a measure of risk and is an integral part of the capital asset pricing model. A company with a higher beta has greater risk and also greater expected returns. **Portfolio Turnover Rate** measures a fund's annual trading activity. It is a percentage used to demonstrate how many holdings in a mutual fund were replaced within the year. **R-Squared** represents what amount of a fund's movements can be explained by movements in its benchmark index. A high R-Squared (between 85 and 100) indicates the fund's performance patterns have been in line with the index. **Sharpe Ratio** is commonly used to gauge the performance of an investment by adjusting for its risk. The higher the ratio, the greater the investment return relative to the amount of risk taken, and thus, the better the investment. The ratio can be used to evaluate a single stock or investment, or an entire portfolio. **Standard Deviation** measures the magnitude of deviations between the values of the observations contained in the dataset. From a financial standpoint, the standard deviation can help investors quantify how risky an investment is and determine their minimum required return on the investment. **Upside/Downside Capture Ratio** represents fund's cumulative return divided by its benchmark's cumulative return during positive and negative market periods. **Weighted Average P/B** compares the book value of fund's stocks with their market value. The price to book ratio indicates how much an investor is paying for a company's assets based on historical valuations. It does not reflect current market value. **Weighted Median P/E** compares the price of a fund's stocks with their per-share earnings, with a higher ratio indicating the market believes that a company has the ability to increase its earnings.
