Overall Morningstar Rating™

Overall rating against 210 Funds in the Morningstar U.S. Fund Real Estate Category as of 06.30.2025, derived from a weighted average of the risk-adjusted performance figures associated with its three-, five- and ten-year (if applicable) Morningstar Rating metrics. (STMDX)

Fund Facts

Investment Objective:

Seeks total return through investment in real estate securities.

Total Net Assets\$68,065,970

Number of Holdings32

Wtd. Avg. P/FFO18.52x

Wtd. Avg. P/ReNAV1.03x

Wtd. Avg. Market Cap\$39.77B

Active Share49.73%

Turnover8%

Annual turnover data is shown as of 09.30.2024, the most recent fiscal year end.

Total Expense Ratio

	Net	Gross
A Shares (STMMX)	1.11%	1.11%
C Shares (STMOX)	1.86%	1.86%
Inst'l Shares (STMDX)	0.86%	0.86%
R6 Shares ¹ (SCREX)	0.75%	0.86%

¹The Fund Administrator, Sterling Capital Management LLC, has contractually agreed to waive its administrative fees, pay Fund operating expenses, and/or reimburse the Fund 0.11% of the Class R6 avg. daily net assets for the period February 1, 2025 through January 31, 2026. Performance would have been lower without limitations in effect.

Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month end and information on other share classes, please visit www.sterlingcapital.com. Performance is annualized for periods greater than one year.

Sector Allocation

Allocations are based on the current weight to funds in the cited Sector. The composition of the Fund's holdings is subject to change.

Philosophy & Process

Under normal circumstances, the Fund seeks to achieve its objective by investing at least 80% of its assets in securities of real estate and real estate related companies, or in companies which own significant real estate assets at the time of purchase ("real estate companies") including Real Estate Investment Trusts (REITs). REITs were created to enable investors to seek the benefits of owning income-producing real estate. REITs own many different types of properties, including apartment complexes, office buildings, hotels, health care facilities, shopping centers and shopping malls.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Fund, please call 888.228.1872 or visit our website at www.sterlingcapital.com. Read the prospectus carefully before investing.

Note: Morningstar Ratings are based on risk-adjusted returns. Morningstar Rankings are based on total return.

A Note on Indices: The volatility of an index varies greatly. All indices are unmanaged and investments cannot be made directly in an index.

The Bloomberg U.S. REIT Index is a float market-capitalization-weighted index that provides exposure to companies classified as per the Bloomberg Industry Classification System (BICS) with a level 3 sub-industry of REIT.

The Lipper Real Estate Index reflects the average time-weighted rate of return of a representative group of real estate funds over time. Refinitiv™ Lipper® defines a real estate fund as a fund that strategically invests in equity securities of companies engaged in the real estate industry. Lipper ensures that no restricted track record extensions are permitted, meaning only real histories represent the independently collected data. Source: Refinitiv Lipper.

Ratings and Rankings would have been lower for Class A shares due to fees and expenses. Lipper and Morningstar rankings are based on total return, including the reinvestment of dividends and capital gains but do not include sales charges for the periods indicated. Rankings shown are for Class I Shares and may be lower for Class A Shares due to higher fees and expenses. Mutual funds are assigned a rank within a universe of funds, relative to a peer group and similar in investment objective as determined by Lipper and Morningstar. The lower the number rank, the better the fund performed compared to other funds in the classification group. Lipper and Morningstar also calculate a percentile measure for each fund ranging from 1% (best) to 100% (worst).

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the risk-adjusted performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of risk-adjusted returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. ©2025 Morningstar. Technical Terms: **Alpha** measures the performance of an investment as compared to a suitable benchmark index. An alpha of one (the baseline value is zero) shows that the return on the investment during a specified time frame outperformed the overall market average by 1%. A negative alpha number reflects an investment that is underperforming as compared to the market average. **Beta** measures the volatility of returns relative to the entire market. It is used as a measure of risk and is an integral part of the capital asset pricing model. A company with a higher beta has greater risk and also greater expected returns. **Portfolio Turnover Rate** measures a fund's annual trading activity. It is a percentage used to demonstrate how many holdings in a mutual fund were replaced within the year. **R-Squared** represents what amount of a fund's movements can be explained by movements in its benchmark index. A high R-Squared (between 85 and 100) indicates the fund's performance patterns have been in line with the index. **Sharpe Ratio** is commonly used to gauge the performance of an investment by adjusting for its risk. The higher the ratio, the greater the investment return relative to the amount of risk taken, and thus, the better the investment. The ratio can be used to evaluate a single stock or investment, or an entire portfolio. **Standard Deviation** measures the magnitude of deviations between the values of the observations contained in the dataset. From a financial standpoint, the standard deviation can help investors quantify how risky an investment is and determine their minimum required return on the investment. **Upside/Downside Capture Ratio** represents fund's cumulative return divided by its benchmark's cumulative return during positive and negative market periods. **Weighted Average P/FFO:** Funds from operations, or FFO, is considered by industry analysts as an appropriate measure of earnings performance for an equity REIT. Generally, FFO adjusts net income for non-cash charges such as depreciation and amortization of rental properties, impairment charges, gains/losses on sales of real estate, and extraordinary items. FFO is not a generally accepted account principle (GAAP), but has been defined by the National Association of Real Estate Investment Trusts (NAREIT) as a standard measure since 1991. **Weighted Average P/ReNAV:** Real Estate Net Asset Value, or ReNAV, is a commonly used metric to estimate the adjusted book value of a Real Estate Investment Trust (REIT). NAV is the mark-to-market value of a company's common equity calculated by applying an estimate of private market values to the company's real estate and other assets and deducting all liabilities. NAV is often presented on a per-share basis. (Sources: Corporate Finance Institute; Investopedia.)
